

# The GXStack Reference Page

Amp Model Options	Speaker Options	Patch Handling
 <p>The Amp Model menu allows you to set the amp model. The example above shows that the 'Miss Fizzy' (US Hi-gain) is currently in use.</p> <p>The About option will show version and registration details where appropriate. Evaluation versions are set to expire after a certain time.</p>	 <p>The Speaker menu allows you to select which speaker model you want to hear.</p>	 <p>The Patch handler allows you to store and recall specific combinations of amp model, amp EQ and gain, speaker and effects settings. As shipped GXStack comes with 9 default patches which are listed in the top section of the menu. Changes to the current patch are saved only when you select the 'Store Patch' option. The 'Save Patch' and 'Open Patch' options save and load a single patch from a disk file which you can have as part of a library of sounds and which also allows you to share sounds with friends etc.</p>
